COURSE OUTLINE

(1) GENERAL

SCHOOL	SCHOOL OF SCIENCES			
ACADEMIC UNIT	DEPARTMENT OF PHYSICS			
LEVEL OF STUDIES	UNDERGRADUATE			
COURSE CODE	405 SEMESTER 5, 7			
COURSE TITLE	ENVIRONMENTAL PHYSICS			
if credits are awarded for separate co lectures, laboratory exercises, etc. If the whole of the course, give the weekly teach	components of the course, e.g. the credits are awarded for the		WEEKLY TEACHING HOURS	G CREDITS
			4	5
Add rows if necessary. The organisation of teaching and the teaching methods used are described in detail at (d).				
COURSE TYPE general background, special background, specialised general knowledge, skills development	Special back	ground		
PREREQUISITE COURSES:				
LANGUAGE OF INSTRUCTION and EXAMINATIONS:	Greek			
IS THE COURSE OFFERED TO ERASMUS STUDENTS	Yes			
COURSE WEBSITE (URL)	http://ecourse.uoi.gr/course/view.php?id=177			

(2) LEARNING OUTCOMES

Learning outcomes

The course learning outcomes, specific knowledge, skills and competences of an appropriate level, which the students will acquire with the successful completion of the course are described.

Consult Appendix A

- Description of the level of learning outcomes for each qualifications cycle, according to the Qualifications Framework of the European Higher Education Area
- Descriptors for Levels 6, 7 & 8 of the European Qualifications Framework for Lifelong Learning and Appendix B
- Guidelines for writing Learning Outcomes

The course offers an overview of the phenomena treated by environmental physics and deals with the basic principles and laws of physics underlying these phenomena. Upon completion of the course the students will be able to:

- Describe the phenomena in the Earth's climate system
- Explain the radiative transfer in the Earth's atmosphere and explain the greenhouse effect
- Calculate the surface temperature as well as the effect of the atmosphere and the relevant feedbacks based on physical laws (Planck, Stefan-Boltzman, etc) and on simple models of radiative transfer (zero d homogeneous model)
- Describe the air pollution cycle (main pollutants, sources, dispersion/diffusion of pollutants, sinks)
- Describe the atmospheric boundary layer and turbulent diffusion of pollutants
- Calculate the diffusion of pollutants based on simplified models of turbulent diffusion (e.g. Gaussian plume)
- Describe the dispersion of pollutants due to atmospheric motion and the sinks

of pollutants and calculate the dispersion and deposition in simple cases

General Competences

Taking into consideration the general competences that the degree-holder must acquire (as these appear in the Diploma Supplement and appear below), at which of the following does the course aim?

Search for, analysis and synthesis of data and information, with the use of the necessary technology

Adapting to new situations Decision-making

Working independently

Team work

Working in an international environment Working in an interdisciplinary environment

Production of new research ideas

Project planning and management Respect for difference and multiculturalism

Respect for the natural environment

Showing social, professional and ethical responsibility and

sensitivity to gender issues Criticism and self-criticism

Production of free, creative and inductive thinking

Others...

Search for, analysis and synthesis of data and information, with the use of the necessary technology. Working independently. Criticism and self-criticism. Production of free, creative and inductive thinking. Respect for the natural environment.

(3) SYLLABUS

Planet Earth and our environment. Laws of physics underlying environmental phenomena. Solar and Earth radiation. The greenhouse effect and global climate change. Air pollution. Chemical reactions and cycles of main pollutants. Ozone in the Earth's atmosphere. Sinks of pollutants. Meteorology's influence on air pollution. Atmosperic boundary layer: description and theory. Models for pollutant dispersion, diffusion and deposition. Effect of thermal stratification in pollutant diffusion. Acid rain. Impact of pollution on health and on the biosphere. Hydrological cycle and biochemical pollution of water (sea, lakes, rivers). Soil pollution.

(4) TEACHING and LEARNING METHODS - EVALUATION DELIVEDY D

DELIVERY Face-to-face, Distance learning, etc.	Face-to-face		
USE OF INFORMATION AND COMMUNICATIONS TECHNOLOGY Use of ICT in teaching, laboratory education, communication with students	Use of Moodle on-line learning platform for the dissemination of notes, problem sets as well as contacting the students		
TEACHING METHODS	Activity	Semester workload	
The manner and methods of teaching are described in detail.	Lectures	39	
Lectures, seminars, laboratory practice,	Tutorials	13	
fieldwork, study and analysis of bibliography, tutorials, placements, clinical practice, art	Bibliography study	50	
workshop, interactive teaching, educational	Non-guided study	20	
visits, project, essay writing, artistic creativity, etc.	Exams	3	
The student's study hours for each learning			
The student's study hours for each learning activity are given as well as the hours of non-			
directed study according to the principles of the ECTS			
the EC13			
	Course total	125	

STUDENT PERFORMANCE EVALUATION

Description of the evaluation procedure

Language of evaluation, methods of evaluation, summative or conclusive, multiple choice questionnaires, short-answer questions, open-ended questions, problem solving, written work, essay/report, oral examination, public presentation, laboratory work, clinical examination of patient, art interpretation, other

Specifically-defined evaluation criteria are given, and if and where they are accessible to students.

Written exam at the end of the course containing theory and problem solving

(5) ATTACHED BIBLIOGRAPHY
